A Computational Analysis of Multiple Sclerosis: A Novel Diagnostic Procedure

Challenge: Health

Category: Senior

Region: Calgary Youth

City: Calgary, AB

School: Webber Academy

Abstract: Multiple Sclerosis (MS) is an incurable but treatable immune mediated neurodegenerative disease; therefore, early recognition of the disease is crucial in improving patient outlook. Current medical procedures are lengthy (1-2 years), expensive, and aggravating. By changing the way we fundamentally tackle diagnostics this project couples a network-based systems analysis of protein interaction networks with artificial intelligence to develop a novel blood based diagnostic tool.

Biography

Hi! My name is Arjun Nair and I absolutely love science! From competing in the CWSF, ISEF and at Sanofi competitions, fairs have given me the opportunity to investigate captivating questions, meet remarkable people and travel North America! I can't wait to conclude my science fair career in Windsor this year.
