School: Fairview Middle Years School

Abstract: My project a study of wood ticks and Lyme Disease. It focuses on the population spread and the need to control infectious diseases. We must also raise awareness of the symptoms and treatment/diagnosis of Lyme Disease.

Biography

I am 12 years old with a lot of interests and hobbies such as volleyball, basketball, badminton, softball, watching documentaries with my dad and dance. Dance is my favorite of all my hobbies and at 10 years old I received an elastic band award for greatest flexibility. I was inspired to do a project on Lyme disease because four of my family members have been affected by it. I am hopeful that my project will help to raise awareness and get Canada's health care to do more research to help victims suffering from infectious bacteria. I would tell other students thinking about doing a project to pick a topic that really interests them.
