Daniel Kanis

Hypertos: A launch into the web based era.

Challenge: Innovation

Category: Senior

Region: Fraser Valley

City: Chilliwack, BC

School: Credo Christian High School

Abstract: Hypertos is an online-based operating system that can be used for downloading applications, playing games, or simply reading a book. The key difference is its use of Internet technology throughout. This implies potentially more applications and an easily up-datable interface. With this latest version, Hypertos has exceeded in technological advances three times that of previously shown.

Biography

Hi, I am Daniel Kanis. I currently attend grade 12 at Credo Christian High School. I busy myself with hobbies such as tennis, hockey, and soccer. Of course I try to leave these off until I am finished my schoolwork. You would probably find me in the library or computer labs working with or on computers. At 15 years of age I started teaching myself to program. After High School I plan to study programming in University. The idea of Hypertos came to me as a fun way to put my web programming knowledge to use. My goal with Hypertos is eventually to outdo the old traditional Operating systems. In the future I hope to expand on the file systems and build a application repository. Although this project took a number of years to build, it still was the best experience ever. If you are interested in a particular idea, build a project! Trust me: it's fun!

Awards

Value

Excellence Award - Senior - Bronze Medal Sponsor: Youth Science Canada	
University of Ottawa Entrance Scholarship Senior Bronze Medallist - \$1000 Entrance Scholarship Sponsor: University of Ottawa	\$1 000
Western University Scholarship Bronze Medallist - \$1000 Entrance Scholarship Sponsor: Western University	\$1 000
Total	\$2 000
