

CWSF 2015 - Fredericton, New Brunswick

Biography

I am a grade 7 student, 13 years old, from a Toronto suburb called Mississauga. I was inspired to do my project because I wanted to something that would help others. To put it in short... I tried to figure out how to make disasters not quite so disastrous. If I were to investigate this further, I would add an electromagnetic lock and a manual release control. If I were giving advice on doing a science fair project to someone, I would tell them to be innovative when picking a topic and that they should try to have fun with their project, or else it's really just pointless.

Sohan Yash Van de Mosselaer

Building a Better Black Box

Challenge:	Innovation
Category:	Junior
Region:	Peel
City:	Mississauga, ON
School:	Tecumseh P.S.
Abstract:	My project makes the recovery of
	applying my innovations, the black
	a locator beacon; and automatical

ostract: My project makes the recovery of airplane black boxes easier because after applying my innovations, the black boxes can float; create energy to sustain a locator beacon; and automatically leave an airplane upon contact with water.
