COMPEL: A Novel Comprehensive Physical Environment Influenced Landslide Model

Challenge: Discovery

Category: Senior

Region: Eastern Newfoundland

City: St. John's, NL

School: Gonzaga H.S.

Abstract: Every year landslides devastate regions worldwide. Hence, this project fuses together two streams of research within landslide dynamics by creating a novel comprehensive environment influenced landslide model (COMPEL). A series of computational experiments and tests are conducted to determine functionality, applicability and accuracy of the model. The applications of the model range from kinematic analysis of future environment influenced landslides to design of mitigation techniques.

Biography

My name is Nitish Bhatt, and I am a Grade 11 student from Gonzaga High School in St. John's Newfoundland. My inspiration in the science stems from my firm belief that knowledge is empowerment. In school have taken and enjoy advanced Physics and Chemistry courses. My studies in science have sparked my interests in exploring the field of physics and systems engineering. I hope to pursue a career in this field to further my knowledge and understanding of natural systems. At the regional science fair, I received the honor of being "Best in Fair" as well as receiving awards from Memorial University Department of Physics and the Institute of Electrical and Electronics Engineers. Outside of my activities in science, I also hold community service as an integral activity. I volunteer with local organizations like the Canadian Blood Services and Association of New Canadians. I am also the founder of an organization called United4Literacy which works to empower children through education and knowledge.
