

# CWSF 2016 - Montreal, Quebec

## Myers Illes

### Grey Water, Green Plants

**Challenge:** Environment

**Category:** Junior

**Region:** Central Interior British Columbia

**City:** Burns Lake , BC

**School:**

**Abstract:** With the growing lack of water throughout North America and the rest of the world, I knew I needed to find a way to help save that water. My project tested the effects of using Grey water from the washing machine as the primary water source on the growth of plants. I gathered my materials, and conducted an experiment to test my idea.

### Biography

I am 13 years old and I live in Burns Lake, B.C. I homeschool through EBUS Academy. I like outdoor activities and I feel that I am lucky to live in an area with so much nature. I love kayaking in the summer and building Lego at home. I love fantasy books and games. I enjoy cooking and like (to make and eat) a variety of dishes. I also love to garden in my flower bed which I plant every year. I take piano lessons as well as public speaking lessons. I was inspired to do my project when I noticed the growing lack of water in my local area, and the rest of the world. In the future I would like to continue testing the effects of grey water from the washing machine over a longer period of time, to test for build up of residue from the soap in the soil. For those who want to do science fair in the future, I suggest that you do what you love, as enjoying what you are doing is the most important part of the experiment.

### Awards

### Value

Excellence Award - Junior - Gold Medal Sponsor: Youth Science Canada	\$250
Western University Scholarship Gold Medallist - \$4000 Entrance Scholarship Sponsor: Western University	\$4 000
Total	\$4 250
