Which Cleaning and Hygiene Products Are Most and Least Effective in Killing Germs

Division: Sciences physiques et des mathématiques

Catégorie: Junior

Région: Tri-County

Ville: Yarmouth County, NS

École: Maple Grove Education Centre

Sommaire: This project examines the effectiveness of six different cleaning and hygiene products in killing bacteria. The area clear of bacteria, (the zone of inhibition), for each product was measured in mm and recorded. Bleach was found to be the most effective in killing bacteria, and water the least effective.
