

ESPC 2016 - Montreal (Québec)

Ashley Evelyn Maureen Brady

Plants Choice

Défi: Environnement

Catégorie: Intermédiaire

Région: Peace Country

Ville: Woking, AB

École: St. Mary's Catholic School

Sommaire: The objective of my experiment is to determine what liquids, in addition to soil, will provide the necessary nutrients to best grow healthy Stettler Wheat. I also wanted to find out in which environment said wheat would develop the best. The end goal of my project is to find a way to use a new liquid for growing purposes in the agricultural sector.

Biographie

I live on a large grain farm. I compete with my horse Historica in Dressage. I achieved top honors in First Level Testing. I love all sports but my favorite is Volleyball. Last year I received top academic student in Gr 8 and top female athlete for my school. I got my inspiration to do my project because since my Dad is a farmer I thought it could be interesting to see what I could come up with around that to try and help the way we farm. My plans for the future is to have farmers irrigate their fields with Coke for the start of the plants life for a few months and then water them with water again. My advice to other students is to pick a project that means something to you in some regard so that you are inspired to do research and see what you can come up with.
