

## ESPC 2016 - Montreal (Québec)

### Kennedy Campbell

#### Thinking in Reverse

**Défi:** Santé  
**Catégorie:** Junior  
**Région:** Fraser Valley  
**Ville:** Chilliwack, BC  
**École:**

**Sommaire:** My project thinking in reverse is about how the mirror and brain reverses the images that you will see when you look through a mirror. I got people to do an experiment where they will look at a course and go through the pre designed course just plain. Then they will do the same course but this time they will be looking through a mirror.

#### Biographie

My name is Kennedy Campbell and I live in chilliwack B.C. I love to do sports and my favourite subject is science. What inspired me into doing this project is seeing the ambulances and the word on the front of their vehicle being backwards. I thought that it would be a great idea for a science fair project so I could learn while making the project. I am hoping that I can go a long way with this project starting with Montreal. I am eager to be learning new things while I am there also. My advise for other students would be to do a project that you are interested in. Don't do a project that bores you cause then you probably want do as well because you aren't ha being fun while doing it. If you can't find an I dea go out for a little bit and see different things that interest you.
