Wasted Water - Do We Really Need Watering Restrictions?

Challenge: Environment

Category: Junior

Region:

City: ,

School:

Abstract: Many communities all over Canada have watering restrictions, but do we really need them? The goal of this experiment is to determine exactly how much water grass needs to grow and be healthy. The grass was watered different amounts and compared to the recommended amount of water. The results determined that most people waste water when they are watering their lawns.

Awards	Value
Excellence Award - Junior - Bronze Medal Sponsor: Youth Science Canada	
Western University Scholarship Bronze Medallist - \$1000 Entrance Scholarship Sponsor: Western University	\$1 000
Total	\$1 000
