Winter Activity Levels of *Lepus Americanus* in Various Forest Types

Division: Physical & Mathematical Sciences

Category: Junior

Region: Renfrew County

City: Cobden, ON

School: Cobden P.S.

Abstract: For this project I measured the activity levels of Snowshoe Hare in winter. Counts were made of accumulated hare tracks in six distinct vegetative areas. The type and number of shrub and tree species were recorded. Hares were found to spend most of their activity in the Deciduous/Coniferous Forest.
