Mold in Sandy Bay First Nations Homes

Challenge: Environment

Category: Intermediate

Region: Manitoba First Nations

City: Marius, MB

School: Isaac Beaulieu Memorial School

Abstract: The purpose of this experiment is to investigate the possible causes of mold growth in my community's houses. Most of the mold reported found in Sandy Bay First Nation, poses a great deal of health hazards, such as chronic respiratory diseases and other health conditions. We designed an investigation to answer some questions that arose from our observations to determine the sources underlining this infestation.

Biographies

Shania - I've noticed that in my community, mold is a major problem. We want to help people get rid of it and find out how it occurs in their homes. In addition we would like to compare the findings from our community with other First Nation communities within the province.

Carolyn - I've noticed that in my community, mold is a major problem. We want to help people get rid of it and find out how it occurs in their homes. In addition we would like to compare the findings from our community with other first nation communities within the province.
