Balancing Native Grassland Conservation with Economic Activity

Division: Génie et sciences de l'informatique

Catégorie: Sénior

Région: Leader

Ville: Sceptre, SK

École: Leader Composite School

Sommaire: Human impact as the result of economic activity is playing an increasing role in the rapid decline of the world's native grasslands. Excess trail development, in particular, is a huge adversary of grassland conservation. This project measured edge effect in an attempt to fully understand the impact of the "human footprint", and focused on analyzing the effects of trail degradation.
