Abstract: Many horses resist oral medications by exhibiting such behaviors as throwing their heads back, backing away, rearing or striking. This creates potential risk of injury to both the horse and handler. I have invented a device that can be used to orally administer medication to horses. Test results show that horses remain calm and relaxed and readily accept the medication using this device.

Awards	Value
The University of Western Ontario Scholarship Gold Medallist - \$2000 Entrance Scholarship Sponsor: University of Western Ontario	\$2 000
Gold Medal - Engineering - Intermediate Sponsor: Youth Science Foundation Canada	\$1 500
Total	\$3 500
