Predominantly Recessive?

Division: Life Sciences

Category: Senior

Region: Chignecto East

City: Pictou, NS

School: Pictou Academy-Dr. T. McCulloch School

Abstract: This project studied whether or not the frequency of several vestigial recessive traits were becoming more common among people of younger generations due to evolution. Recessive traits were found to be significantly more frequent among the older generations. Variations between the North American and sample gene pools were also revealed.
