Keiran Barr

Nicotinamide: Novel Skin Cancer Chemoprevention

Défi: Santé

Catégorie: Junior

Région: Frontenac, Lennox & Addington

Ville: Kingston, ON

École: Calvin Park P.S.

Sommaire: This experiment used a yeast model to explore the anti-mutational properties of nicotinamide and its potential role as an anti-cancerous agent. HA2 (ADE2-deficient) yeast was exposed to 6 hours of UV-B radiation with and without exogenous nicotinamide. HA2 colonies supplemented with nicotinamide exhibited a statistically significant reduction ($P = 0.00001$) in mutational rate after exposure to UV-B radiation.

Biographie

My name is Keiran Barr and I am a grade 8 student in Kingston, Ontario. I have always had an insatiable passion for computers, astronomy, philosophy, and music. I am an innovator and a scientist at heart. I quench my thirst for learning about the world and universe at my blog: sciencewithfelix.blogspot.ca, which is named after my guinea pig. I'm happiest when playing music, writing, programming, or golfing. I have a special interest in skin cancer research, as the disease runs in my family. While I am (admittedly!) new to science, the greatest advice I could give to my peers is this: solving a unique problem usually requires a unique perspective.

Prix

Valeur

Prix du défi - Santé	
Commanditaire: AstraZeneca Canada	
Prix d'excellence - Junior - Médaille d'or	250,00 \$
Commanditaire: Sciences jeunesse Canada	
Bourse d'études de Western University	4 000,00 \$
Médaille d'or - Bourse d'admission de 4 000 \$	
Commanditaire: Université Western	
Total	4 250,00 \$
