The Hands-Free Vise

Division: Health Sciences

Category: Senior

Region: Carlton Trail

City: Watson, SK

School: Watson High School

Abstract: Hand operated vises present awkward and dangerous situations when clamping objects that require two hands. The Hands-Free Vise allows operators to have both hands free to hold objects. It uses hydraulic force to clamp objects and is operated by foot pedals. I designed, manufactured, and integrated several new components into the system. Tests have proven the vise to be effective, convenient, safe, and marketable.
