Recycling Sounds Great

Division: Sciences de la santé

Catégorie: Junior

Région: Chignecto Central West

Ville: Truro, NS

École: Bible Hill Junior High School

Sommaire: This project studied the possibility of making a working speaker using things that are found in an average home. The speaker proved to be environmentally friendly (recycled) and economical (cost-free). Magnet strength, copper wire preparation and winding presented some difficulties in making the voice coil of the working speaker.
