Mass contaminants of cigarettes

Challenge: Health

Category: Intermediate

Region: Sahtu

City: Norman Wells, NT

School: Mackenzie Mountain School

Abstract: this project that I have is very interesting because it talks about how much amount of chemicals there is in a single stick of cigarette. This project of mine matters because it might help our society from a big smoker to a less smoker society. I think that one day my project will make difference.

Biography

my friends gave me an inspiration to do this project because he is a really big smoker, and I've been thinking a lot about how the cigarette affects his body, and I did this project because I want to know what happened when you smoke a cigarette especially when you are an average smoker, and an average smoker smokes a pack of cigarettes every day. Imagine how many chemicals and dirt goes to you body and affects your health when you smoke a pack a day. My advice to this new generation is that no smoking, but if you really want to smoke, be careful and don't smoke a lot.
