How Clean is Your House: Exploring Microbes in the Home

Division: Biotechnologie

Catégorie: Junior

Région: Chatham-Kent

Ville: Chatham, ON

École: St. Ursula E.S.

Sommaire: The purpose of this project is to discover the room that results in the most microbial growth resulting from bioaerosols. I hypothesized that the bathroom would result in the highest amount of growth due to high humidity levels. This was tested by running a method of dehumidification.

Prix	Valeur
Mention honorable - Biotechnologie et les sciences pharmaceutiques Junior	100,00 \$
Commanditaire: Fondation pour la recherche en santé de Rx&D	
Total	100,00 \$
