How Clean is Your House: Exploring Microbes in the Home

Division: Biotechnology

Category: Junior

Region: Chatham-Kent

City: Chatham, ON

School: St. Ursula E.S.

Abstract: The purpose of this project is to discover the room that results in the most microbial growth resulting from bioaerosols. I hypothesized that the bathroom would result in the highest amount of growth due to high humidity levels. This was tested by running a method of dehumidification.

Awards	Value
Honourable Mention - Biotechnology & Pharmaceutical Sciences Junior	\$100
Sponsor: Rx&D Health Research Foundation	
Total	\$100
