How Clean is Your House: Exploring Microbes in the Home

**Division:** Biotechnology

Category: Junior

Region: Chatham-Kent City: Chatham, ON School: St. Ursula E.S.

**Abstract:** The purpose of this project is to discover the room that results in the most

microbial growth resulting from bioaerosols. I hypothesized that the bathroom would result in the highest amount of growth due to high humidity

levels. This was tested by running a method of dehumidification.

| Awards  | Value |
|---|-------|
| Honourable Mention - Biotechnology & Pharmaceutical Sciences Junior | \$100 |
| Sponsor: Rx&D Health Research Foundation                            |       |
| Total   | \$100 |
