The Goldeneye Project

Division: Génie et sciences de l'informatique

Catégorie: Sénior

Région: Calgary Youth

Ville: Calgary, AB

École: William Aberhart High School

Sommaire: This project identified the most significant abiotic or biotic population limiting factors for Common Goldeneye ducks of the Columbia Wetlands. Using standard deviation, the most significant factors were found to be the overall bird species abundance, indicating ecosystem productivity, as well as number of suitable nest trees.

Prix	Valeur
Mention honorable - Sciences de la terre et de l'environnement Sénior Commanditaire: Pétro-Canada	100,00 \$
Total	100,00 \$
