Hashim Farooq

Kinetikos (Self-Charging Thermal) Phone

Challenge: Innovation

Category: Senior

Region: 4-H Canada

City: Brandon, MB

School: Vincent Massey

Abstract: My project is a self-charging thermal phone. It uses heat from your hands and converts it into electricity. I'm hoping for this phone to be used in countries where there isn't power or have a lack of power.

Biography

Hello, my name is Hashim Farooq. I'm just a small town boy with a big dream. For 13 years I've been living in rural Manitoba where science fairs are non-existent. When I was 8 I discovered my passion for taking apart things like RC cars and vacuum cleaners and trying to figure out how they worked. After causing my parents havoc for 4 years I built my first simple robot, from old RC cars, toothbrushes, keyboards and vacuum cleaners. I wanted to showcase my hard work and show the world that I created the world's greatest robot, but that wasn't possible. Back in grade-eight I came up with an idea that seemed impossible. I wanted to reduce climate change. At this age I came to the realization that our world is ending and it isn't going to be like this for long, I had to do something to save it. That's when I came up with the self-charging thermal phone. This phone can be used by anyone and can reduce the amount of electricity we use. I hope to attend an Engineering school where I can enhance my ability to invent for a greater world.
