

## CWSF 2005 - Vancouver, British Columbia

### Kasie Kelln

#### Comparative Analysis of the Human Face and Medical Disorders

**Division:** Health Sciences

**Category:** Senior

**Region:** Carlton Trail

**City:** Duval, SK

**School:** William Derby School

**Abstract:** Pictures of 132 different faces were altered to produce two distinct images: one of 2 right sides, and one of 2 left sides. These side images were compared to their original. People whose side image matched their original had fewer and less severe disorders than when no match was found.
