A Leechy Situation (Chemosensory in Peril?)

Division: Engineering & Computing Sciences

Category: Intermediate Region: North Bay

City: North Bay, ON, Powassan, ON

School: Widdifield Secondary

Abstract: The purpose of this experiment was to determine if low concentrations of

either nickel nitrate or copper nitrate, would affect chemosensory receptors in leeches. The results demonstrated that concentrations as low as 5ppb of these metals did affect chemosensory ability. These results provide insight

towards the delicate balance of ecosystems.

Awards	Value
The University of Western Ontario Scholarship	\$1 000
Bronze Medallist - \$1000 Entrance Scholarship	
Sponsor: University of Western Ontario	
Bronze Medal - Earth & Environmental Sciences - Intermediate	\$300
Sponsor: Petro-Canada	
Total	\$1 300
