Hear Today, Gone Tomorrow: Earphone Listening Levels and Noise Exposure

Division: Life Sciences

Category: Junior

Region: Greater Vancouver

City: Lions Bay, BC

School: York House School

Abstract: This project tested the sound levels of personal stereos and earphones with and without background noise in "lab" and "real" situations. Sound levels were measured using a model head and a decibel meter. Results showed that the style of earphone worn affects whether people adjust volumes on their personal stereos to dangerous sound levels in order to overcome background noise.

Awards	Value
Canadian Psychological Association Award - Junior Sponsor: Canadian Psychological Association	\$150
