### A Novel Neuropsychiatric Wearable System Using Cognitive Behavioural Therapy

**Challenge:** Innovation

**Category:** Intermediate

**Region:** Sudbury

**City:** Sudbury, ON

**School:** Lockerby Composite

**Abstract:** This project is a wearable device, that interfaced biomedical sensors to measure heart rate, skin tension and skin temperature, to diagnose and treat neuropsychiatric illnesses. The wearable transmits data to an app that contains machine learning algorithms which analyze the data and connect it to a cognitive behavioural therapy treatment program. It teaches users to manage their disorder and physical symptoms through a bio-feedback loop.

#### Biography

I am a grade 10 student at Lockerby Composite School, in Sudbury, Ontario. This is my fourth CWSF and I am passionate about science. I volunteer at the local science center in my community, where I teach scientific principles to youth. I enjoy reading, playing piano, and spending time with my dog Niko as pastimes.
