Living With Oil

Challenge: Environment

Category: Intermediate

Region: Northern British Columbia

City: Fort st john, BC

School:

Abstract: The project, Living With Oil, tests if the lifespan of a plant is affected by the amount of oil it is subjected to. Oil is an extremely important resource in society, so it's essential to learn the risks of oil spills. By conducting this experiment, we can learn how to efficiently clean up oil spills.

Biography

Other than science fair, my hobbies include Irish Dancing, reading, and just recently, astronomy. I am enrolled in Freedom Thinkers Education. My project, Living With Oil, was inspired by my local area. Many jobs in BC revolve around the oil and gas industry. If I was to further experiment with this topic, I would like to test the long term effects of oil on our soil. For anyone wanting to get into science fair, I suggest choosing a topic that interests or intrigues you.
