Plants Under Pressure (Treated Wood)

Division: Engineering & Computing Sciences

Category: Junior

Region: East Parry Sound

City: Powassan, ON

School: South Shore Education Centre

Abstract: Chromated Copper Arsenate (CCA) is a widely used wood preservative. The purpose of this experiment is to determine if CCA treated wood affects the germination of seeds and growth of plants. Data suggests that CCA treated wood products did not have negative effects on seed germination or growth of plants.
