## **Instruments Tops How Wood Choice Affect Sounds**

**Division:** Health Sciences

Category: Junior
Region: Halifax
City: Bedford, NS

School: Bedford South School

Abstract: This project investigated if hardwood-topped stringed instruments produce

a different sound than softwood-topped. Two standardized, simple instruments were made; with cedar and maple tops. They were plucked at standard stroke while music-recording software assessed wavefoms. Cedar produced consistent waveforms through the entire spectrum, confirming it

as the popular stringed instrument top wood choice.

Awards	Value
Honourable Mention - Engineering - Junior	\$100
Sponsor: Youth Science Foundation Canada	
Total	\$100
