School: River East Collegiate

Abstract: Solving the age-old physics challenge of perpetual motion could be utilized to generate a free, abundant and efficient energy source. Throughout 4 years of research we believe using natural forces such as magnetism, and other friction reducing contraptions, such as a magnet bearings, a perpetual motion prototype could be created. This machine could, run any device virtually free and eliminates reliance on damaging fossil fuels.

Awards	Value
Petro-Canada Peer Innovation Award - Intermediate - Central Canada	\$200
Sponsor: Petro-Canada	
Total	\$200
