What You See Is What You Don't Get - An Application of Cognitive Psychology

Division: Health Sciences

Category: Junior

Region: Bay Area

City: Acton, ON, Halton Hills, ON

School: St. Joseph (Halton Hills)

Abstract: This project investigates whether repetitive exposure to tasks causes other tasks to become automatic, impeding thought processes, and whether there are gender differences. It was concluded that under the age of thirteen, cognitive abilities are affected by repetitive exposure and that males and females are affected differently.
