Can Education Affect the Brain

Division: Sciences de la vie

Catégorie: Intermédiaire

Région: CDLS - Province du Québec

Ville: Montréal, QC

École:

Sommaire: This is a study of the effect of education on how junior and senior high school students process language. This psycholinguistic experiment demonstrated, for the first time in this age group. That the more formal education one has, the more efficient the language system and the better one's analytical skills.
