Who we are and what we remember

Division: Sciences de la vie

Catégorie: Sénior

Région: CDLS - Province du Québec

Ville: Montreal West, QC

École:

Sommaire: My project was to examine the stress response in a woman's perspective. I wanted to find the correlation between perceived stress and menstrual cycle. Also, to find the correlation between variables of self: self-esteem and locus of control and menstrual cycle. Finally, find the correlation between memory and menstrual cycle. 119 subjects were tested from the age of 12-17 with a mean age of 15.
