X Marks the Pill

Division: Life Sciences

Category: Junior

Region: Bluewater

City: Mildmay, ON

School: Sacred Heart School

Abstract: I surveyed children from the ages 4 to 14 to see if they were able to tell the difference between pills and candy. I learned that the average child had an accuracy of 71.2%. I suggested putting a black X on all drugs, and when we put a black X on the survey, the results increased from 71.2% to 95.8%. My idea could save lives!
