Water Quality: Monitoring the Hunter-Clyde Watershed

Division: Engineering & Computing Sciences

Category: Senior

Region: Prince Edward Island

City: New Glasgow, PE

School: Bluefield High School

Abstract: In the past, algal blooms and other indicators of nutrient enrichment have been observed in the Hunter-Clyde watershed. Nitrate levels, rainfall data, water temperature readings, and physical information were compiled to analyse the quality of water in the Hunter-Clyde watershed during the months of July to October 2005.
