Alysha Legge-Wood

Alysha Light 24

Division: Health Sciences / Environmental Innovation

Category: Junior

Region: Annapolis Valley

City: Windsor, NS

School: Hantsport School

Abstract: The Alysha Light 24 is a solar heater powered by the sun. It is made of recycled materials except for the photo voltaic solar panel and the digital temperature gauge. The purpose of this project is to create heat using only renewable energy.

Biography

My name is Alysha Legge-Wood and I am 13 years old. I am interested in horses and helping the environment. I live in Windsor, N.S. and am in grade 7 at Hantsport School and I enjoy it! I ride horses at Encore farms in Kentville, N.S. and I have been riding there for many years now. My favorite horse there is named Dee Dee, a dark bay mare that is 22 years old. I became interested in the environmentally friendly energy because my dad works in the field, and has preached it every day for many years now. I participate in 4-H, in the light horse project, photography and woodworking. My favorite project is light horse because you get to work with your horse and it is a very good experience for everyone. I have one pet and that is my cat, Buddy. He is the most lovable thing I have ever seen and I love him to pieces.
