Hidden Bacteria

Challenge: Health

Category: Junior

Region: Beaufort-Delta

City: Inuvik, NT

School: Samuel Hearne Secondary School

Abstract: Abstract In this project I wanted to see if antibacterial wipes kill all the bacteria on specific surfaces. I tested several surfaces around my house and swabbed them with cotton swabs in order to determine the effectiveness of the wipes. My results were grouped into two different categories; bacterial and antibacterial.

Biography

I was researching science topics and found bacteria intriguing, then I decided to find what surfaces around the house held the most bacteria. I really enjoy doing science and love to learn new things. Things I love to do is figure skate, make crafts and baking. This is my first time at Canada Wide Science Fair and excited to participate.
