

## CWSF 2015 - Fredericton, New Brunswick

### Are you Losing Energy Down the Drain?

**Challenge:** Energy

**Category:** Intermediate

**Region:**

**City:** ,

**School:**

**Abstract:** My project turns our everyday water use into energy. I have done this by placing a propeller in a drain pipe and using the energy it creates to charge a battery. With simple ideas like this we can have power to use with out burning/using up anything, decreasing our impact on the environment.
