Rien n'est bien sans l'éolien!

Challenge: Energy

Category: Senior

Region: Western Manitoba

City: Wawanesa, MB

School: École La Source

Abstract: Les fondations de notre société reposent en grande partie sur l'énergie et lorsque nous sommes privés de ce bien par panne d'électricité ou catastrophe naturelle, nous réalisons alors combien nos sources d'énergie sont indispensables. C'est pourquoi, j'ai voulu démontrer qu'il était possible de créer de l'énergie renouvelable à partir de matériaux recyclés et ainsi construire un système éolien capable de générer et stocker de l'énergie.

Biography

I am a grade 11 student going to Ecole La Source in Shilo, Manitoba. I am a fan of soccer, I play it all year long since I was four. I live on an organic farm where I help my parents raising animals and cereals. I also spend lots of time with my horse that I started to break down last fall. I found the inspiration for my project watching a documentary about aquaponics on TV that really triggered my curiosity. I thought the idea of raising fishes and grow veggies at the same time would be a great ecological solution considering the ever growing population on Earth. Also, growing food in quantities without the use of pesticides or other chemicals would be great for our environment and our health. I think doing a science project is a great way to answer questions! By following the scientific process, you can learn all the reasoning and steps that goes with it!
