The Stroop Effect

Division: Life Sciences

Category: Senior

Region: Mi'kma'q First Nation

City: Eskasoni, NS

School: Eskasoni High School

Abstract: In my project, I sought to use the "Stroop Effect" to see if there were differences in reaction time between human genders. The procedure involved reading a series of colour words of opposing colours or in the same colour. For example red could be written in yellow. My findings were that males had the shortest reaction time; further research will be the possible reasons why?
